

Safran Software Solutions releases Safran Project 3.6

Safran Project 3.6 is a major release integrating Schedule, Cost, Performance and Earned Value Management into a single software package.

Stavanger, Norway – September the 10th, 2009, Today Safran Software Solutions, a recognized leading provider of project management solutions, announced the availability of the latest release of Safran Project, the powerful integrated schedule, cost and Earned Value management solution.

Safran Project 3.6 sets standards for single packaged integrated solutions for cost and schedule integration, with powerful performance and Earned Value reporting and analysis capabilities.

Delivering significant improvements, this new release will help project focused organizations improve project control, increase profitability, improve decision making and win more business. In addition, Safran 3.6. allows these project focused businesses to more effectively track, manage and report on critical project metrics

Key enhancements available in Safran Project 3.6 include

- Enhanced integration with other schedule and project management applications
- New key project performance and estimate at completion (EAC) metrics
- Enhancements to the Variation Control features
- New Management Reports and extended reporting capabilities strengthen our unique position in project status and performance reporting
- On-line Variance and threshold analyses
- Extended Earned value management capabilities including standard U.S. Federal Government reporting under Department of Defense (DoD) and Office of Management and Budget (OMB) guidance.
- Cost Management, including rates and rate escalations, direct and indirect cost accounts.
- Project and Enterprise scalability

“This new release is a milestone release for Safran Software Solutions. It further strengthens our industry-leading solution designed for large complex projects and project organizations. “Says Øyvind Røberg, Vice President of Technology for Safran Software Solutions.

“We are committed to customer and market driven improvements to our products. Safran Project 3.6 delivers specific capabilities requested by many of our integrated schedule and cost clients around the world to support the growing maturity of their Earned Value management and reporting needs.”

Safran Software Solutions has a track record of market leading products. The new Safran Project 3.6 release represents a bold step forward in our commitment and we expect to continue with significant releases in the next 12 months.
